### Transformation of an Abandoned Carpark @ Shek Pai

**Company** BARRIE HO Architecture Interiors Ltd  
**Designer** Mr. Barrie Ho  
**Tel** 852-21177662

An Adaptive Re-use Architectural Design to provide a new life to an existing architecture by reintroducing new functions and new elements to transform a "Re-birth" to the architecture in a Hyper-Density City. In a Hyper Density City like Hong Kong, there are no more lands to be build. Therefore the strategy of Re-Cycling the existing abandoned architecture by Re-introducing

new functions and elements to Re-Create the Adaptive Re-Use is a MUST. Adaptive Re-Use in Architecture is a vague, premature topic in Hyper-Density City like Hong Kong, but is a kind of Sustainability and Adaptability in City Planning, thus is a hot topic of future vision of Architectural Development in populated Asian country.

### CHONGQING MOUNTAIN & CITY SALES OFFICE

**Company** One Plus Partnership Ltd.  
**Designer** Virginia Lung, Ajax Law  
**Tel** 852-25919308

Gazing across the Chang Jiang River from urban Chongqing, here comes the celebrated scenery district of Nanshan. The green is weaving into the mountains here, with the meandering river, they are all embracing the hilly Chongqing City with their beauty. The sales office of Mountain and City is just located at the picturesque Nanshan district, which the view has inspired the designers for their idea of the interior.

Just as the geographical character of Nanshan, the landscape inside the sales office is assembled with mountains and valleys as well. The walls and rooms are conglomeration of triangular planes and oblique line sets, in different tones of gray, the outcome is a powerful and dynamic topographic chart. No matter where they place themselves, visitors could feel the embrace by hills exactly like the city itself.

### WUHAN PIXEL BOX CINEMA

**Company** One Plus Partnership Ltd.  
**Designer** Virginia Lung, Ajax Law  
**Tel** 852-25919308

Pixel is the most basic element of computer screen; millions of pixels are needed for a complete picture in computer monitors. In language of real life, all the big things in our life are also made of many small things. When all these tiny elements group a formation and move together, there will be waves of vibrant. Therefore, in language of design, the cinema in Wuhan is also a compound of various design elements.

The very first place that customers would see is the spacious lobby with the huge feature wall, which acts as the virtual computer screen for showing of the main design theme. Numerous of marble columns in dot matrix setting reach out from the wall with seemingly random heights. Some horizontal structures act as tables and seats while some become decorative light boxes, yet the most eye catching feature is the signage in brown stainless steel finish with pixel style letters stretching out from this real life dot matrix screen.
